

The ESAIC Advanced Patient Safety Course

Amsterdam University Medical Centers, Location AMC Academic Medical Center,
Meibergdreef 9, 1105 AZ Amsterdam, The Netherlands.

19 - 20 September 2022

What is the APSC?

The ESAIC Advanced Patient Safety Course is a live course to teach patient safety tools to use in acute settings. We offer modern teaching using interactive group work and innovative 360-degree videos of key scenarios, followed by debriefing, to bring examples of critical situations to life.

The APSC forms a key part of the [Safer Care to Save Lives Programme](#), an ESAIC Patient Safety Education programme.

Healthcare professionals attending 100% of the APSC and who pass the course assessment will hold the **ESAIC Advanced Anaesthesia and Intensive Care Patient Safety Certificate**. We propose that bearers of this certificate be regarded as patient safety champions within their own institutions.

You can find out more about this event, including registration fees [on our event page](#).

You can download a preliminary programme [here](#).

The APSC has been accredited by the European Accreditation Council for Continuing Medical Education (EACCME®) for a maximum of 12 European CME credits (ECMEC®s).

Target audience

The APSC is aimed at all Health care professionals, patients and stakeholders interested in patient safety in acute settings: Intensive Care, Perioperative Care, Anaesthesia, Emergency and other settings where acute patients are treated.

Learn by experiencing

The educational targets focus on the following goals:

1. Offer a fully integrated vision of patient safety culture during intensive care and anaesthesia which will be applicable to all acute settings.
2. Provide a framework to apply patient safety tools in different situations.
3. Train in the methodology of learning from errors, the importance of the critical incident reporting, system analysis, corrective action implementation and feedback.
4. Experience the value of human factors and practice resources to improve resolving crisis situations in acute settings as they happen.
5. Encourage attendees to advocate for patient safety in their work environments.
6. Help attendees to join patient safety related networks.

The Advanced Patient safety Course is a part of the [ESAIC Safer Care to Save Lives Project](#) which is supported through an unrestricted educational grant from our Patient Safety Partners: Edwards Life Sciences, Getinge, Medtronic, Mindray and Philips Healthcare.
